## Introducing ANDERTECH to the Swedish plastics industry

Since 1984 ANDERTECH has successfully supplied production equipment to the Danish plastics industry. Now the company is expanding into Sweden, introducing some of the world's leading suppliers, together with its own production management and monitoring software

The upcoming ELMIA Polymer fair in Jönköping 15. - 18. May marks ANDERTECH's launch in Sweden. At booth C 04:27 in Hall C ANDERTECH is presenting a range of market leading products, e.g. gravimetric batch blenders from Maguire, dryers from Vismec and planetary roller reactors from Entex. On top of this, ANDERTECH will be demonstrating its own A-LINK production management solution.

### CEO Erik Sten Andersen:

- Apart from Denmark we have supplied equipment to the plastics industry in England, France, the Czech Republic and Spain, and now we feel it is time to expand into the Nordics. We have a lot to offer and are able to supply our customers with a full range of machines and equipment, together with spare parts and servicing. On top of this we do planning, project engineering and installation of complete production lines.

- Furthermore, based on our extensive knowhow and experience in process control and monitoring we have developed two Manufacturing Management Solutions: A-LINK and Whisper 4.0. A-LINK is a manufacturing control system for larger businesses, designed with complex industrial processes in mind. Whisper 4.0 is a production monitoring tool that collects data from production machinery, giving you a real-time overview over production status on single machines and on entire production systems.

### Representing Maguire

Recently world leading gravimetric batch blending systems provider Maguire chose ANDERTECH to be sole distributor of its products in Sweden and Norway.

Maguire Products is a global technology leader in Materials Handling systems for plastics molding, extrusion and compounding. As an example, Maguire provides the most cost-effective Weigh Scale Blenders on the market. The Maguire WSB series are the most popular gravimetric batch blenders worldwide and Maguire recently sold its 50.000th blender.

### Introducing Vismec

ANDERTECH will present the Maguire product range at the ELMIA Polymer fair, together with introducing the innovative young Italian company Vismec to the Nordics. In only 10 years Vismec has grown to become market leader in the German and British plastics industry. Its honeycomb rotor dryer is a great all-rounder with built-in intelligence. It is the most energy efficient dryer on the market, among other things equipped with fixed adjustable dew point control. All Vismec dryers are fully electric and odour free, which means they can be installed in a cleanroom. Furthermore Vismec offers a full range of high-quality products for conveying, storage and dosing.

### CEO Erik Sten Andersen:

- ANDERTECH is family owned and we are proud of our highly skilled and loyal staff, comprising more than 300 years of experience in the plastics and automation sector. Now we're looking forward to show our Nordic neighbours what we can offer. Due to our yearlong experience in delivering full system solutions from granules and bits to final product ANDERTECH holds a unique position in the plastics industry. Furthermore, looking at the emerging Industry 4.0 trend we feel that with our deep understanding of communication between machines, units and systems we can participate in shaping the future of raw material handling.
