## ANDERTECH to represent Vismec in the Nordics

Following its strategy to strengthen its foothold in the Nordic plastics industry, ANDERTECH is now introducing Vismec to these quality focused markets.

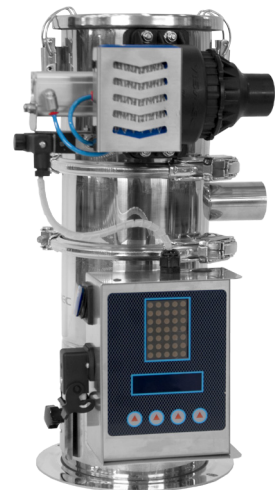

Vismec is a young Italian company having achieved impressive results in just a few years, developing high-quality solutions for the drying of plastic granules. ANDERTECH, founded in 1984, is a well-known supplier of equipment for the Danish plastics industry and is representing a number of suppliers both in Denmark and in the Nordics, together with developing and supplying its own production management and monitoring software.

### ANDERTECH CEO Erik Sten Andersen:

- In 10 years Vismec has grown to become market leader in the German and British plastics industry. So obviously we are very excited to be able to introduce the complete range of innovative Vismec products to the Nordics, starting at the upcoming ELMIA Polymer fair in Jönköping 15.-18. May.
- Vismec has developed some impressive machinery. For instance, its honeycomb rotor dryer is a great all-rounder with built-in intelligence. It is the most energy efficient dryer on the market, among other things equipped with fixed adjustable dew point control. All Vismec dryers are fully electric and odour free, which means they can be installed in a cleanroom. Furthermore Vismec offers a full range of high-quality products for conveying, storage and dosing.

At the upcoming ELMIA Polymer fair in Jönköping 15.-18. May, ANDERTECH will present the Vismec product range together with equipment for the plastics industry from Maguire and Entex together with ANDERTECH's own production management and monitoring systems A-link and Whisper 4.0.

You can find ANDERTECH in Hall C, booth C 04:27. Along with staff from ANDERTECH you can meet Vismec export manager Robert Tesar, who will be at the booth Thursday and Friday.
